As in claims 1, 7 and 12, the prior art of record fails to teach or fairly suggest a controller for controlling interruption and restarting of data writing to a recording medium having the following features:

(a) a lock generator generates a first system clock in accordance with the decoding of the decoder, generates a second system clock based on a reference clock having a predetermined frequency, suspends providing the first system clock to the encoder until the decoding catches up with the encoding when the decoding of the decoder is delayed from the encoding of the encoder, provides the first system clock to the encoder during a period in which the encoding of the encoder and the decoding of the decoder are synchronized, and provides the second system clock to the encoder from when the decoding of the decoder and the encoding of the encoder reach the data at which data recording was interrupted.

The features indicated above, in combination with the other elements of the claims, are not anticipated by, nor made obvious

over, the prior art of record.
